

# FARSENS QUALITY POLICY

In FARSENS we are experts in the design of ICs for battery free IOT systems. Experience, combined with research, has led us to design and manufacture a breakthrough IC for wireless battery free sensors that are able to help most innovative companies to improve their businesses.

We are committed to work closely with our clients to understand their necessities and work hard to provide them a solution which meets their needs and expectations. The fulfillment of all the customer requirements and of other interested parties, including the applicable legal and regulatory ones, is a primary objective for our company.

For this reason, we have adopted a quality management system that meets the requirements of the ISO 9001:2015 standard. FARSENS provides commitment from management and employees to build a culture that improves our system as we use it and assures the continual improvement of its effectiveness. This policy should serve as a reference frame for the management to periodically establish and review the quality objectives, specific and measurable, which will be consistent with the general objectives and commitments of the company.

Roles, responsibilities and authorities will be clearly defined by management within the quality management system. The management will ensure that each employee understands their role and the importance of the quality system processes within the company. This policy will be communicated to all employees to help in their understanding of how they contribute to the success of the business through the achievement of departmental and individual objectives.
